DRYiCE iObserve powered by SolarWinds

Observe applications and
infrastructure in the digital+ economy

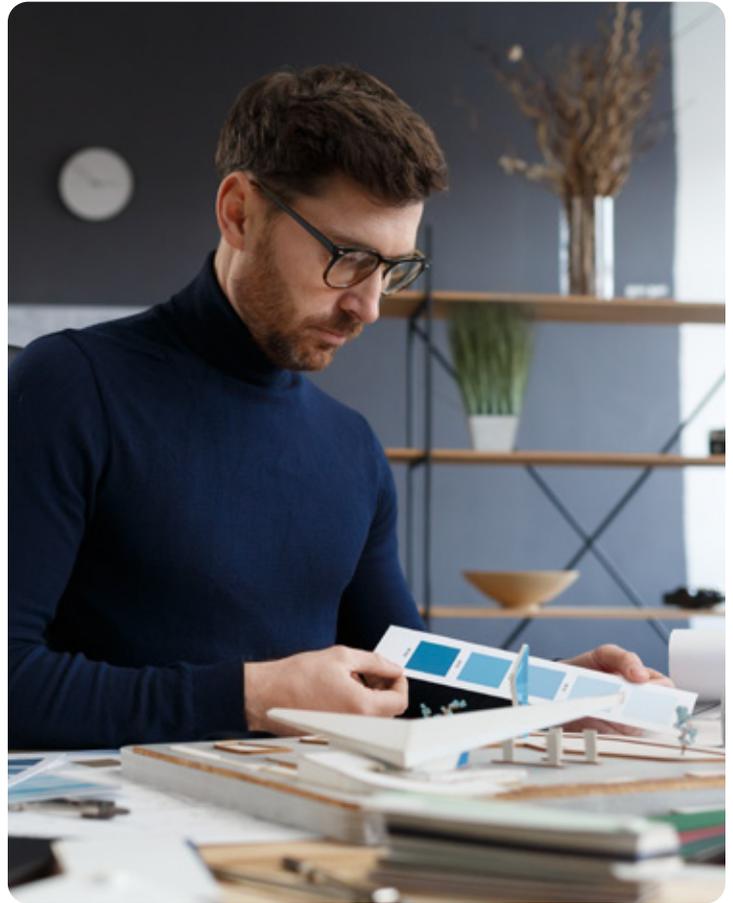

Digital transformation is accelerating across organizations of all sizes

Today, many IT leaders struggle to accelerate digital transformation while addressing typical challenges: a fast-paced, increasingly complex and distributed environment with multiple tools and vendors, cloud, BYOD, steep information growth, security, and many other concerns.

Building on consistent market leadership in network, infrastructure and application observability.

Observability goes beyond conventional monitoring to speed up problem resolution. The need of the hour is the requirement for cross-domain analytics and actionable intelligence, delivering greater visibility, service dependency insight, and operational predictability.

Superior value delivered

Observability for all

Lower total cost of ownership

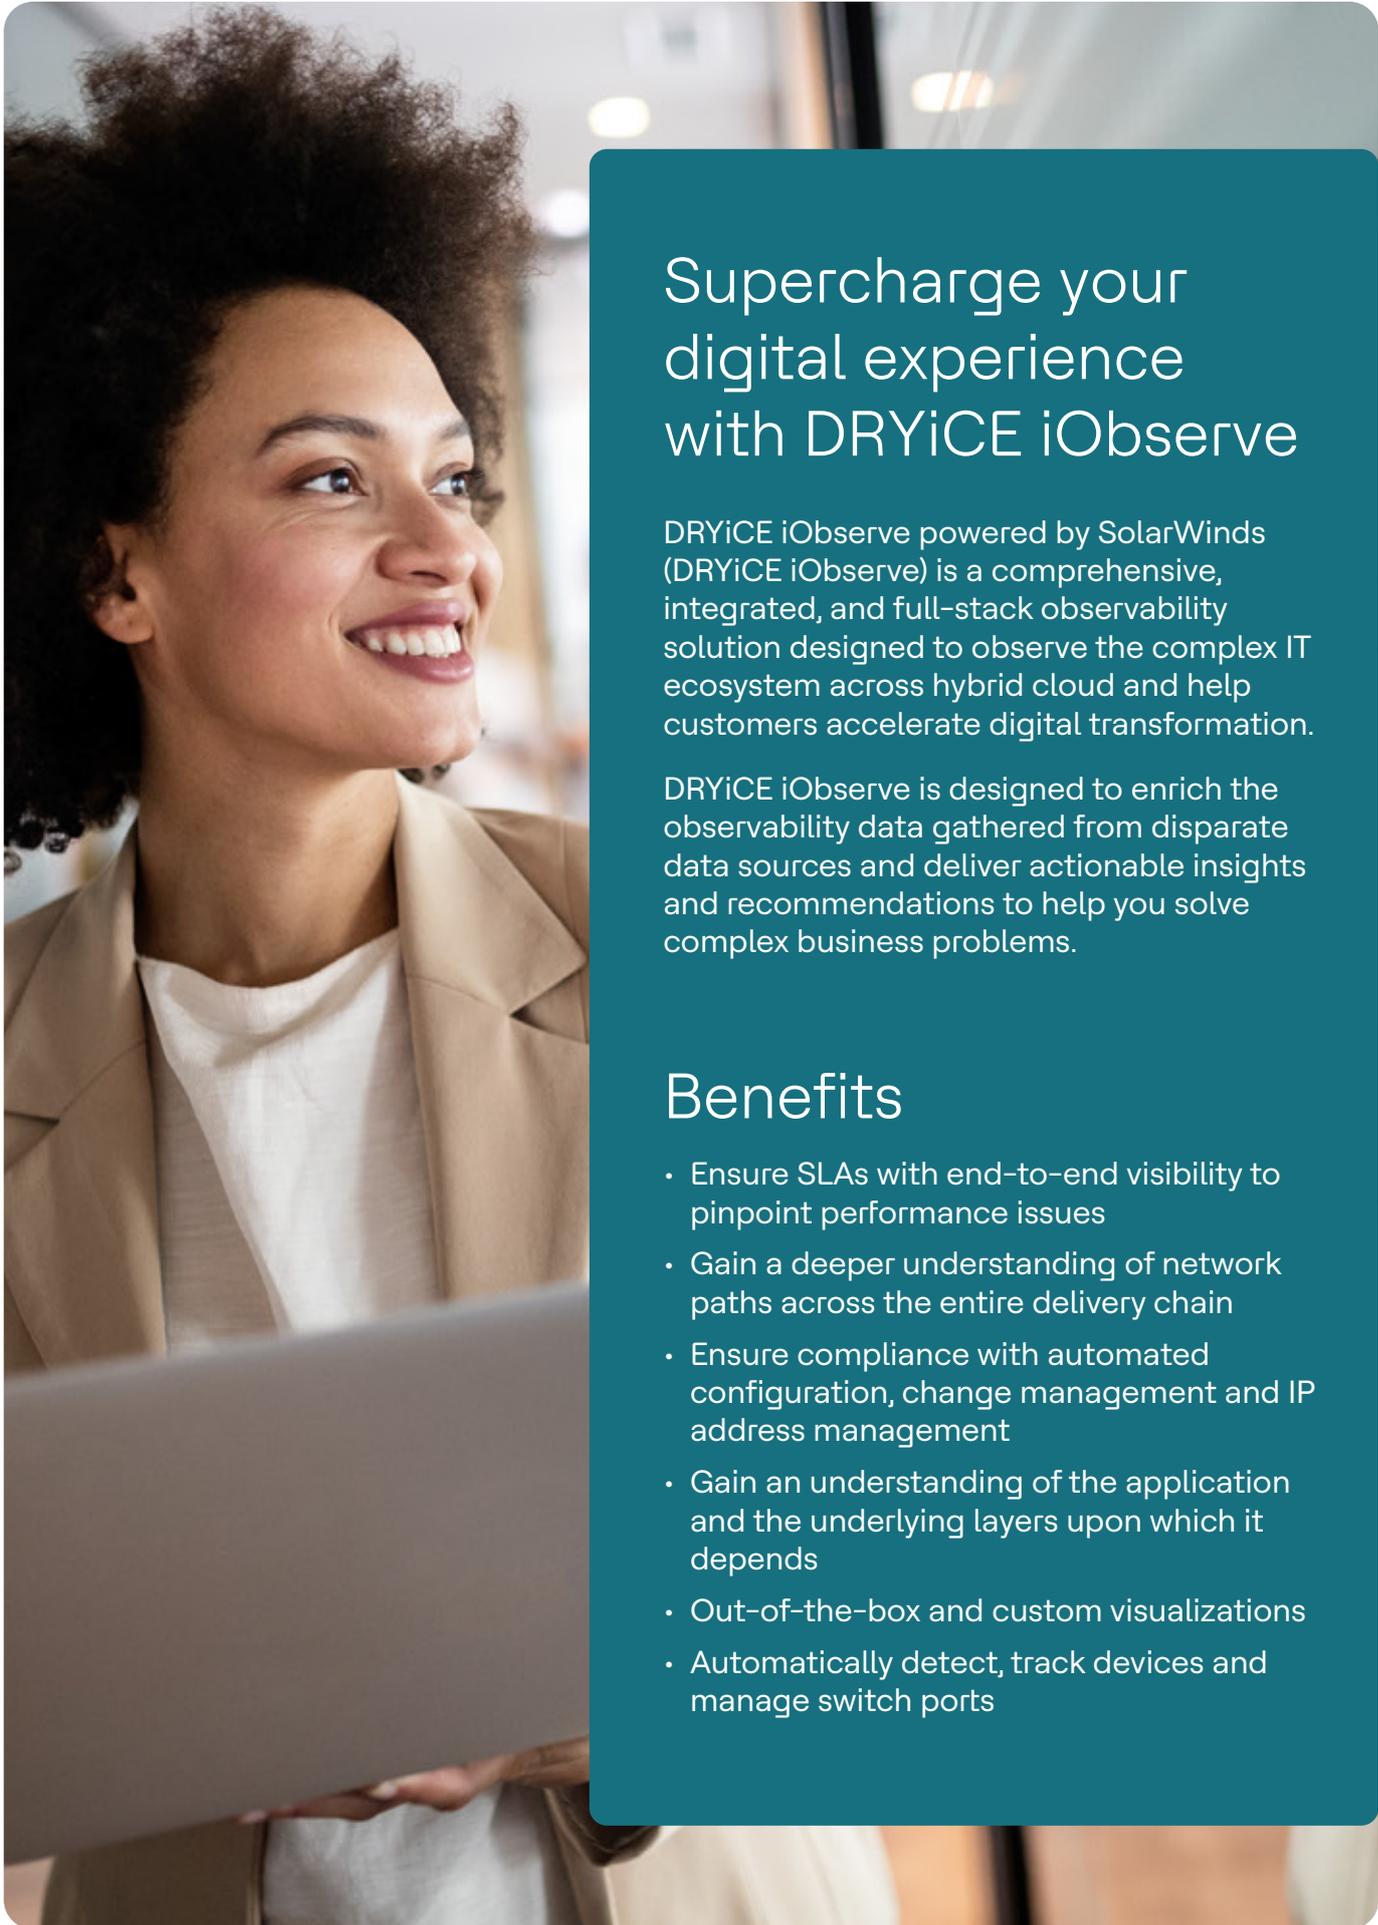

Easy to use

Actionable intelligence

Full stack and integrated

Supercharge your digital experience with DRYiCE iObserve

DRYiCE iObserve powered by SolarWinds (DRYiCE iObserve) is a comprehensive, integrated, and full-stack observability solution designed to observe the complex IT ecosystem across hybrid cloud and help customers accelerate digital transformation.

DRYiCE iObserve is designed to enrich the observability data gathered from disparate data sources and deliver actionable insights and recommendations to help you solve complex business problems.

Benefits

- Ensure SLAs with end-to-end visibility to pinpoint performance issues
- Gain a deeper understanding of network paths across the entire delivery chain
- Ensure compliance with automated configuration, change management and IP address management
- Gain an understanding of the application and the underlying layers upon which it depends
- Out-of-the-box and custom visualizations
- Automatically detect, track devices and manage switch ports

Accelerate your digital transformation with DRYiCE iObserve

DRYiCE iObserve is a full-stack solution for all, no matter your size or where you are in your digital transformation journey. It is simple to get started with and expand, with powerful capabilities leveraging unified user experience (UX), collection, and analytics functions.

DRYiCE iObserve enables organizations to focus on key issues, gain deep, holistic visibility, enjoy greater economies of procurement, scale, and support. The solution covers the below specifications:

Infrastructure, network, and application performance observability

Intelligent AIOps correlation, alerting, and customizable reporting

Physical and virtual hosts, SD-WAN, and device monitoring

Configuration management for networks, virtualization, servers, and applications

Historical and real-time dashboards

Automated discovery and dependency mapping

Let's take a closer look at these specifications

Infrastructure, network, and application performance observability

- Observe your entire on-premises, cloud, or hybrid application environment and infrastructure from one tool
- Increase service levels, and reduce downtime with multi-vendor network monitoring
- More than 1,200 applications, system, and infrastructure monitoring templates

Physical and virtual hosts, SD-WAN, and device monitoring

- Improve operational efficiency with SD-WAN-related out-of-the-box alerts
- Enhance performance, troubleshoot slowdowns and reduce outages
- Unify metrics for faster root cause identification and troubleshooting

Automated discovery and dependency mapping

- Custom maps—enjoy full power and flexibility with custom maps
- Time travel—track map changes dynamically with time travel
- Auto-generate Maps, display dependencies, and correlate cross-stack IT data to identify and resolve problems

Historical and real-time dashboards

- Improve operational efficiency with out-of-the-box dashboards, alerts and reports.
- Real-time dashboards easily identify and troubleshoot performance, capacity, and configuration problems
- Create custom dashboards that display relevant metrics and visualizations for specific use cases and applications

Intelligent AIOps correlation, alerting, and customizable reporting

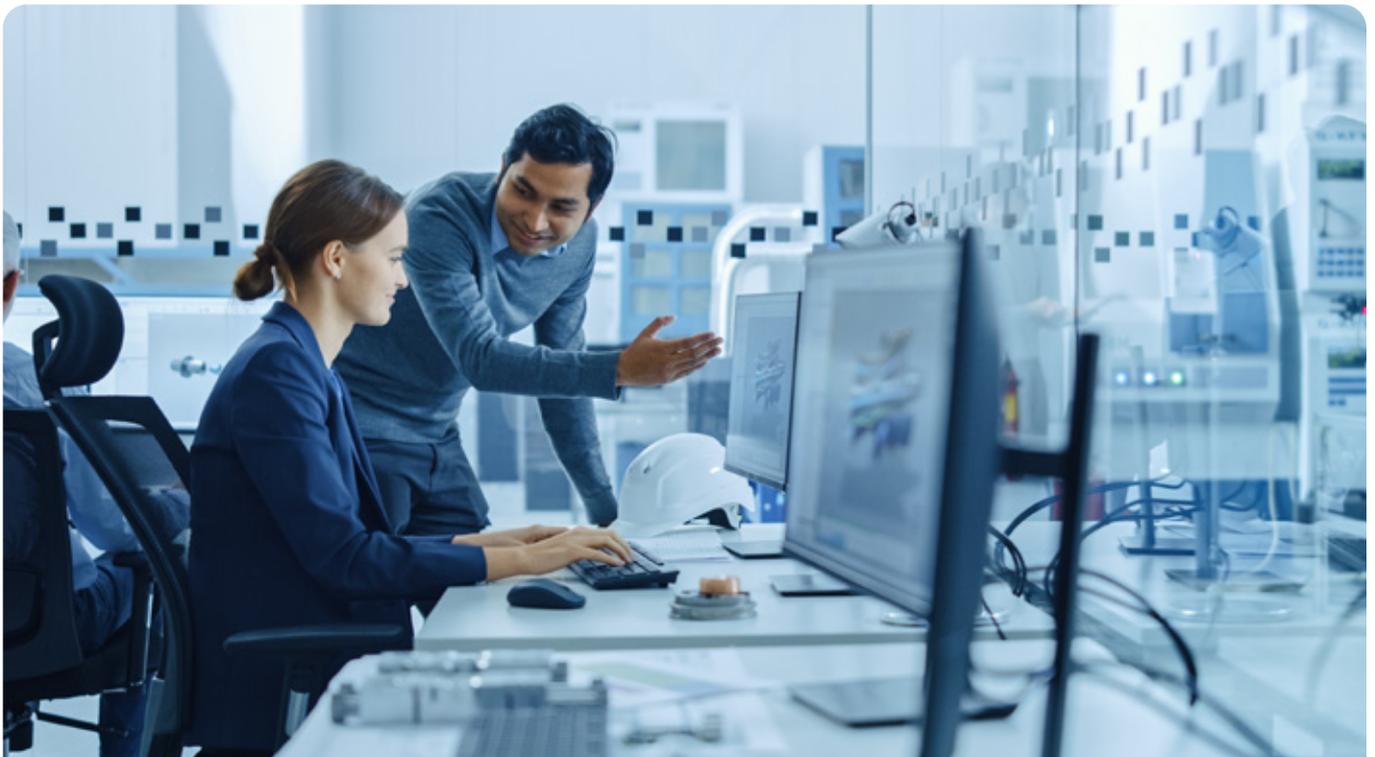

- Alerting engine utilizes intelligent logic-building technologies to decrease alert fatigue, detect anomaly and improve conventional alerts
- Generate user and device reports using customizable out-of-the-box templates
- AIOps approaches— ML, statistical models, and statistical transformations—enables quick and accurate performance analysis and troubleshooting

Configuration management for networks, virtualization, servers, and applications

- Detect, alert, and report on changes to hardware inventory, registry entries, binary and text files, software inventory and more
- Correlate configuration changes with performance and pinpoint configuration issues

About DRYiCE

DRYiCE™ is HCLSoftware's foray into the world of AI and Intelligent Automation, focused on transforming and simplifying enterprise IT and business operations. Our exclusive products and platforms enable enterprises to operate in a leaner, faster, and cost-efficient manner while ensuring superior business outcomes.
