HCLSoftware

HCL DevOps Deploy

Deploy anything, anywhere.
From mainframes to microservices.

HCL DevOps Deploy

HCL DevOps Deploy automates application deployments across IT environments and provides quick feedback for continuous delivery, while providing the audit trails, versioning, and approvals needed in production.

Benefits and value

Delivery lifecycle compression:
Reducing development time by eliminating manual release of database scripts, generating upgrade and rollback scripts, and shortening feedback loops.

Capitalization - Governance and pipeline flow:
Approvals, visibility and quality gates ensure only tested configuration are released.

Continuous delivery:
Go beyond automated deployment alone and incorporate repeatability, predictability, auditability, and traceability into your pipeline.

Automated deployment:
Single click deployment of complex applications with multiple tiers, services, and components.

Application release and delivery automation:
Delivering changes to your production with automation and focusing on building great software.

Hybrid application support:
Support for all platforms from distributed microservices, both on-prem and cloud based.

Environment management:
Enable enterprises to operate and manage multiple environments directly from HCL DevOps Deploy.

Continuous integration for faster Software delivery:
Allowing users to build, test, and deploy.

Debugging less with automated scans and tracking:
Pinpointing security risks for a faster fix.

⊙ Features

01. Create and visualize large, complex automation processes at a glance, and easily understand the conditions for success and failure.

02. Set your notification preferences within communication tools like Slack and Microsoft Teams for HCL DevOps Deploy and never miss a beat.

03. Deployment automation to a broad mix of environments includes mainframes, microservices, on-prem, public, private and hybrid cloud.

04. The extensive plugin site includes over 300 integrations that allow you to easily connect source configuration repositories, change management systems or middleware.
